

UCP and AmEro Global Technologies (AGT) sign a cooperation contract for the United States, Canada and Mexico

UCP public relation, Ruggell June 1st 2010

After not being active for a long time in one of the most innovative technology markets in the World, UCP Processing has signed a contract with US based AmEro Global Technologies LLC (AGT). This partnership marks the start of the UCP Group's re-entry into the North America market.

"For us as a technology company this 1st of June 2010 is a remarkable day" states UCP's Managing Director Franz-Xaver Lenherr, during the signing of the cooperation contract with AmEro Global Directors, Tony Sisca and Dan Pace. "We are thrilled by the chance to work together with experts, whose experience and contacts in the industry expand over great depths."

"With the take over by Ruggell, Liechtenstein based Buechel Family Holding, it is our goal to become the leader with respect to plasma applications in high tech markets", says Hansjoerg Kuenzli, Technical Director of UCP Plasma Technologies. "

"To do so, it is necessary to be present in all regions, as close as possible to the customer. And of course, it is essential to go with trustful partners, such as AGT" adds Franz-Xaver Lenherr.

For AmEro Global Technologies this cooperation compliments their product and technology portfolio perfectly. "When we first started the company it was clear to us, that we had to focus on innovative and complimentary technologies and products for the demanding North America markets. Adding UCP plasma products brings us one step closer to our goal" says Dan Pace, AGT Managing Director. His partner, Tony Sisca also adds "Working for Leybold and Oerlikon for many years has taught us that much of the leading vacuum technologies in the marketplace today originated in the areas of the Rheintal region of Switzerland and Liechtenstein. It was a natural for us to actively pursue our European network to find the right fit for our company."

AmEro Global Technologies is a newly founded company which aims to bring the best technology partners together. The two Directors of AmEro Global Technologies, Tony Sisca and Dan Pace bring an extensive customer network and sales experience to the partnership. Their respected market management skills in vacuum coating technology markets, such as Semiconductor, Packaging, Data Storage, and Solar together with UCP's proven plasma technology is a winning combination for the North American customer. AGT LLC operation focused on the North American market with offices in Dallas, PA and Portland, Oregon brings strong value commitment to their customers and delivers superior quality service.

UCP Technology Group

UCP Processing Ltd. is a leading developer, manufacturer and supplier of innovative plasma cleaning systems for optimizing the productivity and quality of the semiconductor back-end industry. Plasma cleaning is an environment friendly method for removing residues of contaminants from sensitive surfaces without damaging them. UCP plasma cleaning systems increase the yield in chip assembly and substantially improve the reliability of the components.

AmEro Global Technologies, LLC

AmEro Global Technologies, LLC (AGT), is a leading distributor of specialty thin film process systems for research and industry. AGT represents and markets a select group of companies offering an extensive portfolio of complementary products for the Semiconductor, Vacuum Coating, Packaging, Data Storage and Solar markets.
